Education

The Hong Kong University of Science and Technology, HKSAR

Aug 2023 – Aug 2027

B.Eng. in Computer Engineering

HKSAR Government Scholar | HKUST University Scholar | Engineering Student Ambassador | Computer Engineering Mentor

Professional Experience

Hong Kong Hospital Authority, Kwun Tong, HK

Artificial Intelligence Engineer (Placement)

Jul 2025 – Jun 2026

- Built “MCQ Generator”, a Gradio web app that processes large hospital guideline PDFs using Qwen VLM (via internal API) with chunked extraction; generates customizable MCQs, short-answer, and descriptive questions for doctor training.
- Curated high-quality datasets from confidential A&E and anesthesia PDFs (text, tables, charts); collaborated on iterative fine-tuning of MedGemma to reduce hallucinations while preserving generalization and internal knowledge retrieval—led to approved secure chatbot prototype.
- Developed multilingual (English, Mandarin, Cantonese) talking avatar interface for internal chatbot using Whisper + Azure Speech (Windows TTS for Cantonese) and MuseTalk for real-time GPU-accelerated lip sync, improving clinical user engagement.
- Evaluated and selected open-source translation models for doctor–patient communication, including ethnic minority languages (Urdu, Bengali, Hindi), with focus on clinical terminology accuracy.

TabNext IT Healthcare, Lai Chi Kok, HK

Front-End Programmer (Intern)

Jun 2025 – Aug 2025

- Enhanced Vue 2 + Vuetify codebase for clinical & veterinary management system prototype; implemented role-based access control for sensitive features (patient records, billing) and built custom calendar component for flexible appointment scheduling with precise time-slot blocking across non-standard grids (Google Calendar–inspired).
- Developed real-time patient list filtering (by date, status, name, appointment type) using client-side search and Vue reactivity; integrated live blood pressure monitor data into intake forms (with hardware engineer) for automatic vital signs population during consultations.
- Delivered UI enhancements, bug fixes, and iterative features in a 5-person remote team; supported live prototype demonstrations to prospective clinic and veterinary clients.

Igears Technology Ltd., Kwai Fong, HK

Full Stack Programmer

Jun 2024 – Aug 2024

- Developed client-facing internet speed test web app integrating Ookla/Speedtest.net, Fast.com, and Measurement Lab APIs; created animated speedometer-style gauge using Vanilla JS, HTML5, CSS3, and Canvas.
- Prototyped rule-based customer support chatbot with Botpress and Rasa, including conversation flows and human-in-the-loop ticket escalation.

Competitions

IBM x Watson Hackathon

Bronze Medal (Team)

SuperEd: AI-Powered Personalized Education App

Oct 2025

- Led team to build SuperEd, an adaptive AI learning platform that personalizes study guidance by analyzing user mistakes, time spent, and upcoming deadlines; integrated IBM Watsonx LLMs for an interactive chatbot tutor (explanations, practice questions, real-time feedback), developed responsive UI, and deployed full application on Vercel for live judging demo.
- Presented strong business case to judges, positioning SuperEd as superior to platforms like Canvas through personalized AI features, superior usability, and cost-effectiveness for educational institutions.

Skills

Programming: C++ (Advanced), Python + AI libraries (Advanced) **Web:** Vue.js, Vuetify, HTML/CSS (Intermediate) **DevOps & Systems:** Docker, Linux (Intermediate) **Version Control:** Git, GitHub

Languages

Native: Bengali **Fluent:** English, Urdu, Hindi **Conversational:** French **Basic:** Cantonese, Mandarin
